

Training Kit™ A Lite

Training Kit A Lite, is our basic kit for training the fundamentals of pneumatics. The student is able to build different types of pneumatic circuits based upon industrial applications. The components are placed in a robust case and all the mounting is made on the base plate.

Training Kit A Lite includes the most common industrial pneumatic components such as:

- Manual Valves 3/2, 5/2 och 5/3 function
- Pneumatic valve 5/2 function
- Mechanical valve 3/2 function
- Solenoid valve 3/2 och 5/2 function
- Flow control valves
- Single acting and double acting cylinders with sensors
- FRL units, pressure regulator
- Quick exhaust valve

For more advanced training in pneumatics we recommend Training Kit A and B which includes a larger variety of components and experiments.

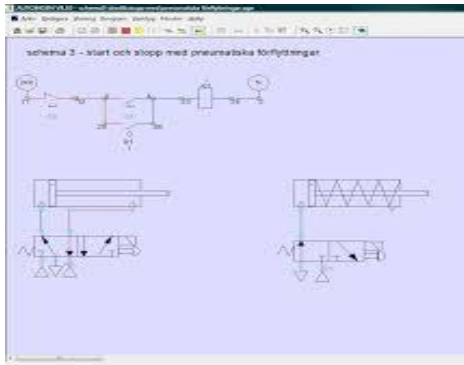

Technical specification:

Size base plate WxHxD	600x640x30
Weight base plate	8kg
Size case BxHxD	600x500x170
Weight case	ca 12kg
Voltage supply	230V AC
Working pressure	4-6 Bar 4mm pneumatic fitting
Article code	TKA-LITE

Accessories:

Pneumatic 1 – Simulation software for pneumatics

Compressor, silent - 50l/min, 15l tank, 8 bar, 40dB

Trolley for Training Kit
